CLEANSERS & TONERS

There are many different methods by which to cleanse the skin. The end result, however, is always to remove dirt, oil, and dead cells at the surface of your skin.

There is no standard or “by the book” routine that will work for everyone. This category has multitudes of products, some of which can cause more harm than good. Products can include abrasives, clarifiers, cleansing creams, cleansing lotions, soaps, toners, or astringents.

Something as simple as a “well-known” soap that you may use in the shower or bath can be an irritant. Therefore, it is important to understand your skin, the various types and meaning of cleansers, and what your needs are. Do you have flawless skin, normal skin, mature skin, combination skin, or oily skin? Are you having a flare-up of acne or are there major concerns with on-going acne? Are you dealing with radiation or chemotherapy for cancer treatments? Is your face always dry with patches of flaky skin? Does cold weather or hot weather affect the appearance of your skin?

Once this has been determined, and it can change, you need to find the products that will best handle these specific needs. In order to do so, you need to understand the significance or importance of the ingredients within each product, i.e., is it one of the first ingredients mentioned or one of the last? The most significant ingredient is listed first; the least significant is listed last except in the case of OTC Drugs.

Cleansers

The type of cleanser you need should be based on skin condition and skin type. Numerous variations exist within each product group. Most of them are mild with regard to feel. Yet, that does not guarantee mildness. Therefore, you need to discover the range of products within your skin type and find one that feels comfortable to you and works effectively.

- Abrasives or Scrubs remove dead cells, excess oils and dirt. Most products, including Buf-Puf®, are abrasive and can easily damage or scar the skin. Products claiming to be exfoliators should also be smooth in texture. Any graininess can, again, be too irritating or abrasive.

- Clarifiers strip the skin. Many contain acetone or similar ingredients. Even though some physicians like these because it can exfoliate, we do not recommend products containing acetone, which is toxic.

- Cleansing Lotions are traditionally used to remove the oily residue left after applying a cream. Some contain alcohol, which can leave your face drier than you need or want. Try to find a cleansing lotion with no alcohol or as little alcohol as possible. There are a few lotions that add moisture and keep the face from drying out.

- Soaps have always been the most popular type of cleanser. They are, however far from the best means to cleanse the skin. Soaps can be very misleading because of the tremendous variety of products, which include “detergent soap bars” and some very irritating ingredients.

- Astringents and Toners do not really “tone” the skin, but rather de-fat the surface of your skin. They effectively remove grease, oil and dirt without leaving any residue. Astringents contain drying alcohol so you may find these too drying, even for oily skin. Most, including Witch Hazel, also contain coal tar derivatives, which can be irritating to some people. These may feel cool on the skin but hey will begin to over-stimulate oil glands within 4-6 weeks of daily use. Toners are mild than astringents, they help the skin feel cool and refreshed while possibly eliminating mild irritations.

Many manufacturers have begun using the term “toning lotion” on their products. The alcohol is noted as SD (specially denatured) and a number; the higher the ‘SD’ number, the greater the alcohol content.
Toners do not contain alcohol and simply de-fat the surface of the skin. Contrary to popular belief, toners do change pH or shrink pores.

Cleansers can be used to aid dry skin problems, control or prevent acne, or to maintain balance for flawless skin.

All cleansers contain surfactants. A surfactant is a chemical that reduces the surface tension of water. There are four types of surfactants and they are needed to remove dirt and oil, for example, soaps have surfactants. Most soaps, however, are not cosmetics. Therefore, they are not required to list their ingredients. When you see a soap that lists its ingredients, it is probably marketing its product as a cosmetic since it might be promoting a benefit such as exfoliation or to moisturize. You will need to be aware of the ingredients and what they do.

In the end, simply treat your skin with respect and tender care. Use products that you feel comfortable with and products specifically designed for your type of skin and make sure to read directions on the products. Be sure to find products that work well for you and accomplish their intended purpose.

You want to stay away from ingredients such as acetone. This is a solvent and will actually remove skin and is highly toxic. Some “experts” feel that acetone is good because it brings new cells to the surface. This is not necessarily true. There is no evidence that suggests that a solvent is good for your skin. Would you put nail polish remover (solvent) on your face?

It is also important to note that alcohol, especially with the addition of alum, will make the pores look smaller. This is only temporary.

Ingredients, especially coloring agents, are used in most astringents and toners. These are found in the ingredients section under D&C or FD&C with a color. These are all produced from certified coal tar colors and are used in all cosmetic products. The coloring agents that are known to be severe irritants or toxic are not used in our products. And, most people that like to use Witch Hazel as an astringent or toner should be aware that this, too, is made from coal tar, only clear.

Other ingredients can be even more drying. Care should be taken to be certain that you are not using something that could cause more irritation.

One last note, if you are using Alpha Hydroxy/glycolic acids or a prescription form of Vitamin A, i.e., Retin-A® or its enhanced version Renova®, do not use an astringent that contains alcohol, this will be too irritating.

Available Products

- Antisepation™ Cleansing Gel
- Pro-C® Antioxidant Cleansing Gel
- Non-Drying Facial Cleanser
- Smooth As Silk Facial Cleanser
- Fuel™ Facial Wash (Men)
- B-Kleer™ Antiseptic Acne Wash
- B-Kleer™ Salicylic Acid Wash
- B-Kleer™ BP 2.5 Cleansing Lotion
- B-Kleer™ BP 10 Cleansing Lotion
- Bacicleanse™ Antiseptic Wash
- Benecleanse™ Ultra Gentle Wash
- Vitox™ Antioxidant Wash
- Skin Freshener Toner
- Glycerin Cleansing Bar
- Makeup Remover
- Shammy Wash Cloth

Protocol

- Always dampen skin prior to application of a cleanser
- Always cleanse and pat skin dry prior to applying any topical products
- Travel and weather changes dictate that you consider changing your cleansers to optimize the results
- You may also use a variety of cleansers daily based on needs

Q & A

Q: There has been a great deal of concern about the addition of Lauryl Sulfates in products. Why do we use them?
A: Lauryl Sulfates are surfactants. They are necessary. The tests that found these components to be toxic are very misleading. It is based on utilizing very large doses of these chemicals and leaving them on the skin for prolonged periods of time. We utilize low levels of these ingredients and cleansers are never left on the skin for any extended period of time.

Note: Retin-A® and Renova® are registered trademarks of Ortho Pharmaceutical. But-Puf™ is a registered trademark of 3M™
Antisepation™ Cleansing Gel (OTC Drug)

This is the most potent antiseptic cleanser made and available in the United States. It is a maximum strength OTC medication that does not require a prescription. Antisepation® kills 99.996% of fifteen different bacteria including Staph, Pseudomonas and E.coli, 99.9% of Propioni bacteria found in acne and it kills within two (2) minutes! It is alcohol-free so it will not dry the skin as most antiseptic and anti-bacterial cleansers do. Even more amazing is its ability to last from four to six hours on the skin or whatever you touch.

Recently testing also indicates that this is highly effective against MRSA The 97% kill time for MRSA within 2 minutes.

This unique product meets two significant FDA monographs as medication. First as an anti-bacterial agent and also in the First Aid Class I assay, which is very hard to achieve.

Regulatory Status
- FDA Monograph for Topical Antimicrobial Drug Products for OTC Human Use.
- FDA Monograph for Class I First Aid Treatment as an Antiseptic Wash.

Indications
- To promote cleanliness by allowing regular and continuous cleansing without drying the skin.
- To kill germs (E.coli, Pseudomonas, and Staph), which cause infection.
- To kill germs (Propionibacterium), which cause acne.
- To induce improved wound healing by controlling the sterility in open wound sites.

Key Features
- Antisepation™ is manufactured in accordance with manufacturing practices for DRUGS.
- Antisepation™ kills 99.996% of harmful germs, including E.coli, Pseudomonas, and Staph, on contact.
- Antisepation™ is highly effective against MRSA, and the 97% kill time is two (2) minutes.
- Eliminates bacterial and fungal contamination.
- Broad-spectrum antimicrobial action, encompassing Gram-Negative, Gram-Positive, Fungi, Yeast and Acid Fast Bacteria.
- Benzethonium Chloride disrupts bacterial growth and forces it to destroy itself.
- A water-soluble formulation improves the permeability of agents into the skin. This action causes improved efficacy to kill bacteria within the skin and to remove debris.
- Offers immediate sanitation. No waiting for active ingredients to become effective.
- Non-drying cleanser and leaves no residue or sticky after-effect.
- Antisepation™ is an alcohol-free product. Offers critical benefits since alcohol-based antiseptic cleansers indicate added risk of potentially flammable solution in a wound site.
- Skin conditioning and healing agents leave your skin feeling smooth and soft.
- Designed for continuous use.
- Recommended for post-operative care on all skin types.

Industry Concerns
Healthcare Workers: Major obstacles to proper cleansing exist in the workplace. These include time and conditioning of the skin’s barrier. Healthcare workers must use antiseptics for hand-washing, pre-op skin preparation and surgical hand scrubs. The FDA certifies these products as over the counter (OTC) Drugs.
- Most antiseptic cleansers require at least 10 to 25 seconds for a 99% kill rate. Very seldom do people wash for the required length of time.
- Poor compliance with hand hygiene is mainly due to dermatitis or hand chapping of healthcare personnel. One agent that causes dermatitis is SLS, which decreases barrier function of the skin.

Wound Management: Intact skin is the first line of defense against microbial invasion in the body. The purpose of skin antisepsis is to destroy or remove transient microorganisms.
- Several bacteria studies have proven that there is a direct correlation between high levels of bacteria in pressure ulcers and the failure to heal. High levels of bacteria are also found in necrotic tissue.

Medical Uses
Cleanse between patient treatments. Use in patient treatments. Washing body parts with an antiseptic agent will result in a dramatic decrease in bacterial loads.
- Control and minimize infections.
• Use as a surgical cleansing agent to reduce the number of resident flora for the duration of the procedure.
• Helps with acne-prone skin.
• Many nosocomial surgical wound infections are preventable through proper hand washing and appropriate surgical skin preparations.
• Antiseptic agents increase the likelihood of killing potentially pathogenic bacteria.

Esthetic Uses
• Excellent hand, nails and foot cleanser for proper hygiene and treatments.
• Highly recommended for any client with an open cut or wound.
• Personal use by skin, hair and nail care professionals.
• Use in lieu of primers in nail treatments.

Home Uses
• Cleanse hands, face and body for normal hygiene.
• Keep countertops, sinks and bathroom areas spotless and bacteria-free.
• Cleanse cuts and wounds to eliminate infections.
• An excellent cleanser during diaper change or treating diaper rash.

Directions
Personal Uses
• Wet hands and other areas to be treated.
• Place a small amount of ANTISEPATION™ into your hands and work into lather.
• Apply lather on areas to be treated with gentle, circular motion.
• Rinse clean.
• Use as often as necessary.

Equipment and Counter Uses
• Apply to slightly damp sponge or paper towel.
• Cleanse area lightly but thoroughly.
• Allow area to dry.
• Clean as often as needed.

Caution
• External use only. Do not use in eyes.
• In case of deep wounds or puncture wounds, consult a physician.
• If irritation develops and persists for more than a few days, discontinue use and consult a physician.
• Do not leave on skin for more than one minute without rinsing.

FAQ see page 34

Ingredients
Active: Benzethonium Chloride (0.20%).
Other Ingredients: Purified Water, Ammonium Lauryl Sulfate, Lauramidopropyl Betaine, Hydroxypropyl Bis-Hydroxyethylidimonium Chloride, Propylene Glycol, Hydroxypropylmethylcellulose, Sodium Chloride, Diazolidinyl Urea, PEG-4L, Methylparaben, Propylparaben, 3-iodo-2-propynylbutylcarbamate.

© 2013
Terminology

**Antiseptic:** 1) Tending to stop the growth of microorganisms.  
2) A substance that stops the growth of microorganisms.

**Antiseptic Dressing:** 1) A dressing treated with a germ or bacteria killing drug.  
2) Used to treat infections.

**Antimicrobial:** Destroys or inhibits growth of microorganisms.

**Anti-sepsis:** Opposing sepsis, putrefaction, or decay. Also, arrests the growth of microorganisms on living tissue. Removes both transient and residential flora.

**Bacteria:** Small one-celled microorganisms. Bacteria and its respective species cause the severity and outcome of any infection.

**Benzethonium Chloride:** A disinfectant for the skin. Treats some infections.

**Broad-spectrum:** Fast-acting, non-irritating characteristic while decreasing number of microorganisms on intact skin.

**E.coli:** Abbreviation for Eschericia coli, a species of bacteria of the family enterobacteriaceae. E.coli can be found in water, feces, milk and soil. A typical and frequent cause of urinary tract infections. Causes serious infection in wounds and is life threatening.

**Flora:** Microorganisms (viruses, bacteria and fungi) that live on or in a body. They compete with disease-causing microorganisms and provide a natural immunity against infection.

**Germ:** Any microorganism, especially one that causes disease.

**Infection:** The invasions of the body by germs that reproduce and multiply, causing disease by cell injury, release of poisons, or germ-antibody reaction in the cells.

**Necrotic Tissue:** Referring to the death of tissue in response to disease or injury.

**Propionibacterium:** Bacteria found on the skin of humans. P.bacterium is common in acne.

**Pseudomonas:** A type of bacteria often found in wounds, burns, and infections. They have light reflecting colors.

**Staphylococcus:** A type of bacteria normally found on the skin and in the throat. This can cause certain kinds of severe, pus-forming infections. Staphylococcus aureus is a species that often causes abscesses.
Antiseparation™ Foaming Hand Sanitizer (OTC Drug)

Regulatory Status
- FDA Monograph for Topical Antimicrobial Drug Products for OTC Human Use.
- FDA Monograph for Class I First Aid Treatment as an Antiseptic Wash.

Indications
- For use as a topical First Aid antiseptic to help prevent infection from minor cuts, scrapes and burns.
- To promote cleanliness without having to constantly and continuously wash your hands.
- To eliminate bacteria without drying the skin.
- To kill germs (E.coli, Pseudomonas and Staph), which cause infections.
- To induce improved wound healing by controlling the sterility in open wound sites.

Key Features
- Manufactured in accordance with manufacturing practices for DRUGS.
- Kills 99.9% of harmful germs, including E.coli, Pseudomonas, and Staph, on contact.
- Kill rate continues to work and improves to 100% within 30 seconds. Kill rate lasts for hours.
- Leave on skin for added protection.
- Does not require washing or rinsing.
- Eliminates bacterial contamination.
- Broad-spectrum antimicrobial action, encompassing Gram-Negative, Gram-Positive, Fungi, Yeast and Acid Fast Bacteria.
- Benzethonium Chloride disrupts bacterial growth and forces it to destroy itself. This product may help prevent overt skin infections with regular use.
- A water-soluble formulation improves the permeability of agents into the skin. This action causes improved efficacy to kill bacteria within the skin and to remove debris.
- Offers immediate sanitation. No waiting for active ingredients to become effective.
- This cleanser is non-drying.
- Antiseparation™ Hand Sanitizer is an alcohol-free product. This offers critical benefits since alcohol-based antiseptic cleansers indicate added risk of a potentially flammable solution in a wound site as well as significant drying agents.
- Leaves no residue or sticky after-effect.
- Skin conditioning and healing agents leave your skin feeling smooth and soft.
- Designed for continuous use.
- Foaming dispenser for ease of use.
- Fragrance-free.

Industry Concerns

Healthcare Workers: Major obstacles to proper cleansing exist in the workplace. These include time and conditioning of the skin’s barrier. Healthcare workers must use antiseptics for hand-washing, pre-op skin preparation and surgical hand scrubs. The FDA certifies these products as over the counter (OTC) Drugs.

- Several bacteria studies have proven that there is a direct correlation between high levels of bacteria in pressure ulcers and the failure to heal. High levels of bacteria are also found in necrotic tissue.

Medical Uses

Cleanse for hours of protection. Use in patient treatments. Washing body parts with an antiseptic agent will result in a dramatic decrease in bacterial loads.

- Control and minimize infections.
- Use as a surgical cleansing agent to reduce the number of resident flora for the duration of the procedure.
- Many nosocomial surgical wound infections are preventable through proper hand washing and appropriate surgical skin preparations.
• Antiseptic agents increase the likelihood of killing potentially pathogenic bacteria.

**Esthetic Uses**
• Highly recommended for any client with an open cut or wound.
• Personal use by skin, hair and nail care professionals.

**Home Uses**
• Cleanse hands and face for proper hygiene.
• Cleanse cuts and wounds to eliminate infections.
• An excellent cleanser during diaper change or treating diaper rash.

**Directions**

**Personal Use**
• Apply to the hands as often as desired when washing with soap and water is not convenient or when conditions suggest the use of an antiseptic.
• Place a small amount into your hands.
• Apply lather on areas to be treated with gentle, circular motion.

**First Aid Treatment**
• Clean the affected area(s).
• Apply a small amount of this product on the area 1 to 3 times daily.
• Do not rinse off.
• May be covered with a sterile bandage.

**Caution**
• External use only. Do not use in eyes.
• Do not apply over large areas of the body.
• In case of deep wounds or puncture wounds, consult a physician.
• Not for use on children under 2 years without the advice of a physician.
• If irritation develops and persists for more than a few days, discontinue use and consult a physician.
• This product is not meant to diagnose or treat serious infections.
• Do not store in or near extreme heat and protect from direct sunlight.

**FAQ see page 34**
Pro-C® Antioxidant Gel Cleanser

Indications
- To cleanse all skin types with a non-irritating wash.
- To soothe the skin while adding nutrients.

Key Features
- Gentle, refreshing, and natural ingredients.
- Contains multi-fruit acids that exhibit exfoliation qualities without irritation.
- Effective free radical fighting antioxidants including Ascorbic Acid, Kola Nut, Aloe Vera Gel and Algae extracts that soothe the skin.
- Light foaming activity but powerful cleansing action.
- Leaves skin feeling silky smooth for hours.

Directions
- Wet face with tepid water.
- Apply liberally to face.
- Massage gently.
- Rinse and pat dry.
- Use 2-3 times daily.

Caution
- Keep out of eyes.
- Keep away from small children.
- For topical use only. If irritation develops, discontinue use.
- Not to be ingested.

**Ingredients**
Ultra 10 Rejuvenating Gel Cleanser

Indications
- To cleanse all skin types with a soothing wash
- To moisturize while gently exfoliating

Key Features
- Gentle cleanser
- Mild pH
- Natural ingredients
- Parabens-free
- Contains Alpha Hydroxy Acids from sugar cane and multi fruit acids
- Contains Lactic Acid to moisturize the skin
- Calming and soothing calming and soothing Algae Extract
- Effective free radical fighting antioxidant Vitamin C
- Light foaming activity with powerful cleansing action.
- Leaves skin feeling silky smooth and fresh for hours.
- Excellent shaving gel for ladies legs
- Pharmaceutical grade ingredients

Directions
- Wet face with tepid water
- Apply liberally to face and body
- Massage into skin until foam develops
- Rinse with tepid water and pat dry
- May be used 2-3 times daily on the face

Warning
- Keep out of eyes
- Keep away from small children
- For topical use only

FAQ see page 34
Non-Drying Cleansing Lotion

Indications
- Soap-less cleanser for sensitive, dry and normal skin.

Key Features
- Extremely mild cleansing lotion.
- May be used on most skin types, including mature skin. May be too moisturizing for acne-prone skin.
- Excellent for pre- and post-peel and facial cleansing.
- Can be used with or without water.
- Can remove most makeup, even around the eyes.
- Perfect cleanser to begin AHA / Glycolic program, Similar to Cetaphil® and Purpose®.
- Use to deactivate Glycolic Acid peels (pH 7.0).
- Use for pre- and post-op care for laser treatment.
- Contains no harsh ingredients.

Directions
- Regular daily use.
- Apply a liberal amount to skin surface.
- Massage gently to liquefy and remove dirt and other impurities.
- Rinse thoroughly with tepid water and pat dry.
- Without water: remove gently with tissue.
- Professional Peels: See Peel Protocol under Professional treatments.

Caution
- For external use only.
- Avoid contact with eyes.
- Keep out of reach of small children.
- If irritation develops, discontinue use.

FAQ see page 34
Smooth As Silk Facial Cleanser

Indications
- To help condition the skin with vitamins.
- To soften and moisturize the skin.

Key Features
- Improves moisture levels in the skin.
- Aloe Vera heals the skin.
- Vitamin A heals the skin.
- Vitamin B Complex conditions the skin.
- Vitamin E acts as an antioxidant, heals and moisturizes the skin.
- Perfect for cleansing and conditioning.
- Excellent as a total body wash or foaming bath for dry skin.
- Designed for most skin types. Works especially well on normal to oily skin.
- Will not strip the skin.
- Will not dry the skin.

Directions
- Shake well.
- Apply liberal amount to damp skin.
- Massage gently to liquefy and remove dirt, oil and other impurities.
- Rinse thoroughly and pat dry.

Bath/Shower
- Apply liberally to dampened skin.
- May also be used as a foaming bath treatment by adding two capfuls to warm running bath water.

Caution
- For external use only.
- Avoid contact with eyes and mucous membranes.
- Keep out of reach of small children.
- If irritation occurs, discontinue use.

FAQ see page 34
Fuel™ Facial Wash

Indications
- To remove build-up caused by cleansers and treatments.
- Cleanses all dirt and oils in the skin and in the hair follicles.

Key Features
- Anti-residue formulation.
- Removes soap scum from skin that can clog hair follicles and pores.
- Keeps skin clean and debris-free.
- Improves the performance of skin treatment products.
- Non-irritating.
- Methyl Salicylate (Wintergreen) gives you a fresh, clean and invigorating feeling as well as a disinfectant and topical anesthetic.
- Panthenol (Vitamin B5) helps metabolize fats and enzymes in the skin.
- Peppermint Oil is antibacterial and invigorates the skin.
- Non-alkaline so as not to damage the hair shafts from alkalinization.
- Use one to two (1-2) times a week for healthier skin, but may be used daily.

Directions
- Use one to two (1-2) a week in lieu of your normal cleanser.
- Apply small amount for thick, compact foam to cover the skin.
- Massage lightly for 30 seconds.
- Leave on for one (1) minute. Rinse well.
- Repeat if necessary.

Warning
- For external use only. Avoid contact with eyes. If irritation develops, discontinue use.
- Can be used daily, but not intended for this purpose.
- Keep out of reach of small children.

FAQ see page 34
Shammy Wash Cloth

Indications
- To improve cleansing without harming even the most sensitive skin.

Key Features
- Does not pull or stretch the skin.
- Will not harm even the most sensitive skin.
- Perfect for all skin types including people on Retin-A® and Accutane®
- Soft and luxurious.
- Super absorbent, up to 10 times its weight in water.
- Easy to pack and use when traveling.
- Great for eye patches.
- Can remove makeup.
- Lint free.
- Rinses clean, easy to wring out and virtually drip-free.
- Machine washable.
- 100% organic, 100% bio-degradable.
- Size: 64.0 square inches.

Directions
- Rinse thoroughly before and after each use.
- Softens immediately in water.
- Use as a wash cloth with cleansers, soaps, body shampoos and bath gels.
- After each use, wash out with soap or tap water.
- Allow to air dry. To restore luxurious texture when cloth dries hard, simply rinse with warm water for a few seconds.
- NOTE: The Shammy comes in hard sheets and is then cut into squares at the plant. It is then pre-moistened with a very slight amount of water so that it can be folded and placed into the pouch package. The pouch contains a pinhole to allow air out and to let the Shammy dry over time. If the hole were not there, it would create mildew and mold. The Shammy, at some point, will become hard again. Whether moist or dry it is the same product. It will dry hard as a brick within hours after use. There is nothing wrong with the dry Shammy in the package.

To Sterilize
- Place 1 part Clorox to 9 parts water in a bowl.
- Immerse 3 or 4 times but do not leave to soak.
- Rinse in tap water.
- Air dry.

Caution
- If irritation develops, discontinue use.

FAQ

Antiseparation™

Q. Why is this product more effective than other products in killing germs and bacteria?
A. Most other antibacterial soaps contain Triclosan. This ingredient is not FDA approved as an antiseptic for first aid use because it is not effective in killing germs and bacteria. Antiseparation™ Cleansing Gel contains Benzethonium Chloride, which is approved by the FDA and is the strongest antibacterial agent for a kill rate of 99.99%.

Antiseparation™ Foaming Hand Sanitizer

Q. Why is this product more effective than other products in killing germs and bacteria?
A. Most other antibacterial soaps contain Triclosan. This ingredient is not FDA approved as an antiseptic for first aid use because it is not effective in killing germs and bacteria. Antiseparation™ Cleansing Gel contains Benzethonium Chloride which is approved by the FDA and is the strongest antibacterial agent for a kill rate of 99.9%. Kills germs on contact.

B-Kleer™ Antiseptic Acne Wash

Q. Can Benzoyl Peroxide be irritating?
A. Yes, Benzoyl Peroxide is an irritant. It can cause drying and peeling; along with mild redness and possible swelling if left on too long.

Q. How do I know what an adverse reaction is?
A. Benzoyl Peroxide can also cause a brief tingling sensation or a warm feeling. If this feeling lasts for more than 5 minutes, do not leave on as long the next time you use it (we recommend that you wait a day before trying again). If the situation does not improve, discontinue use. If the redness become excessive or causes severe swelling, discontinue use and consult a physician (dermatologist).

Q. If I find this to be too irritating, what should I do?
A. If you still have it on, wash off with cool water immediately. It should not be left on for more than 2 minutes. If your condition appears severe, apply a cold compress and an emollient such as petrolatum (Vaseline®).

Note: Vaseline® is a registered trademark of Chesebrough-Ponds USA Co.

B-Kleer™ BP 2.5 Cleansing Lotion

Q. Can Benzoyl Peroxide be irritating?
A. Yes, Benzoyl Peroxide is an irritant. It can cause drying and peeling; along with mild redness and possible swelling if left on too long.

Q. How do I know what an adverse reaction is?
A. Benzoyl Peroxide can also cause a brief tingling sensation or a warm feeling.
